

Animals on Film is pleased to announce the launch of the 'Best Practice Capture, Handling & Restraint Program DVD Series' for Wildlife Professionals. This education resource has been produced by a group of Zoo industry personnel who possess zoo keeping, education, veterinary nursing, research and film making expertise. The Snakes, Raptors & Zoonoses program's film footage has been based around interviews with recognized experts in the areas of Herpetology, Raptor management and Zoonotic disease.

The Best Practice Capture Handling & Restraint Programs are a useful resource especially if you are training new staff, or prior to working in a field research or captive environment where hand restraint and trapping techniques are required. The Zoonoses program is a must for any Occupation Health & Safety Department where staff are actively involved in the care or management of animals or their by products. The programs aim to develop "Best Practice Animal Management" principles. Special attention is given to wildlife professionals working with fauna in a captive or field environment. In addition animal ethics and safety issues are listed for; capture restraint, husbandry and veterinary procedures.

Each volume offers a double disc set comprising 50 to 70 minutes of DVD vision in easily accessible chapters plus an ADOBE PDF manual on CD ROM.

The DVD can be viewed on a Computer or Television screen & is available in both PAL or NTSC Versions.

We currently now have a number of Australian & American TAFES & Colleges using our programs as support material for Zoo keeping & other animal management related courses. For independent reviews on our programs go to <http://www.animalsonfilm.com/reviews-animal-handler-training.html>

Program & Site license prices for the "Best Practice" Capture Handling & Restraint DVD Programs. Site licences agreements can be obtained contact Jo Cowie at jocowie@optusnet.com.au to discuss your institutions or individuals specific needs.
